Covercool Cold Cot

Flexmort

The Covercool
Cold Cot (Moses
Basket not inc.)

Storage case

Flexible Cold Pad

Flexmort's Covercool Cold Cot cools deceased babies allowing parents to spend time grieving with the baby. This is recognised by Baby Death Charities (including UK SANDS) to assist with the grieving process. The Flexmort Cold Cot is in use at numerous UK maternity departments and hospices.

The new cooling technology allows the Flexmort Cold cot to be very light-weight and does not contain environmentally damaging refrigerant. Therefore, it can easily be taken home by parents as well as used in the maternity department or hospice. Developed with maternity departments, bereaved parents and SANDS, the system preserves the deceased allowing parents time to grieve with the baby without requiring transfer from the maternity ward, home or hospice.

The small cooling machine circulates cold water to a small flexible cooling blanket which is placed under the baby. The cold blanket reduces the infant's core body temperature through direct contact.

The Flexmort Cold Cot is:

- Small at just 27cm x 23cm x 13cm
- Light (only 3.8kgs)
- Portable - comes in a storage case
- Flexible as can cool in any moses basket, cot etc
- Whisper quiet

Customer Testimonials - see www.flexmort.com for further information

"I think what you have done in developing this unit is a wonderful thing and as painful as this is, it does give parent's like me, some quality time with their baby, it certainly did for me" **C. Travers Jan 2012**

"We are proud to be one of the first hospitals in the country to have one...an amazing piece of equipment"
Matron Of Maternity , Queen's Hospital, as reported in The Burton Mail Oct 2011

"The Flexmort Cold Cot was quite simply fantastic and exceeded all our expectations. It preserved the body so well that the family were able to keep their daughter at home for the whole seven days before the funeral. By directly cooling the infant, the system allowed the family to grieve in a room at ambient temperature whereas an air con unit would have made the whole room cold. I am so pleased we were able to provide this level of care at the most difficult time for any family. I would have no hesitation in recommending Flexmort; we are now in the process of looking at some of their other cooling systems to enable us to offer this level of care to other families with larger children. I can see benefits for Flexmort's cooling systems for Hospice Care at home for all families."
Tracie Dempster, Head of Care at chYps (UK Children's hospice) Dec 2011

"We had a family whose 15 day old baby died over the Christmas period - clearly a very upsetting time for the whole family. The family could not bear the thought of their baby being taken from the hospice to the Funeral Directors. We used the Flexmort Cold Cot to keep the baby cool & have been very impressed with the ease of use and the results. We were able to keep the baby at the hospice for an incredible 12 days using the equipment, and the family were very grateful that there was no need to transfer to the Funeral Directors at all. There is no doubt that the use of the system helped the parents cope with the bereavement."

Christine Forster, Service Manager at Naomi House (UK Children's hospice) Jan 2012
